

# Track Rod Clamp

ME-9836

## Introduction

The Track Rod Clamp is used to elevate a PASCO Dynamics Track, creating an incline. The clamp attaches to a 0.5 inch support rod, such as the Base and Support Rod (ME-9355), and holds the track in place. The thumbscrew on the left is used to secure the track to the clamp, and the thumbscrew on the right secures the clamp to the rod.

## Using the clamp

To attach a PASCO track to a rod using the Track Rod Clamp:

1. Slide the square nut on the clamp into the T-slot on the side of the dynamics track, as shown below.
2. Insert a 0.5 inch rod into the clamp.
3. Adjust the position of the clamp on the track and rod until the track sits at the desired angle.

 **TIP:** For maximum stability, place the clamp as close to the elevated end of the track as possible.

4. Turn each thumbscrew clockwise to secure the clamp to the rod and track.
